Hello everyone! I just got started with tehnology and as every beginner..It's kinda hard to get used to the nowadays techonology. I just found out about Alexa and I need some opinions about her. Is she worth it? I mean I saw a lot of very good feedback about her but still I have my doubts. Moreover could I (less than an average man in techonology) get along with her? She could the perfect tool for me but still if I can't use her it's still useless:(.

I'm looking forward for your suggestions and answers! Thank you!

Amazon Alexa App is one of the best for the Alexa-enabled devices that let you set up and manage your Alexa experience as per your location. You can easily set up your smart home devices including smart lights. The voice-controlled device which is also known as"personal assistant" is called Alexa. Through Alexa App for echo, you can control your home and all other smart devices.

Perhaps Alexa is incredibly sensitive to traces of a foreign accent that's otherwise undetectable, or maybe she doesn't like Southerners, but she just doesn't seem to understand me very well

Buy her! Also you should follow each and every instruction carefully for Alexa App Setup. Its setup is now easy as it contains only three-step which is installation, signing in and connect.
